Executive Summary for Ukraine: 2022 At a Glance

For Ukraine, 2022 was a watershed year, due to the Russia's invasion. There was mass evacuation, major physical destruction and loss of life. The economy shrank dramatically.

At the same time, EU4Business continued to support SMEs, almost on the principle of "business as usual", with additional funds from the EU. The number of supported SMEs increased by 54% and their turnover rose by 18%. This in part reflects the fact that SMEs are filling gaps in the economy, as they are small and flexible, whilst larger producers may have suffered more from the disruption in normal terms of trade caused by the war.

Ukraine became the leader in the EaP in gender, with 48% of the supported businesses now being owned or managed by women.

Impact of EU Support in Ukraine

Results per Pillar

Stephen Tupper

Team Leader,
EU4Business
Facility

2022 was a test of resilience for the SME sector in Ukraine, as well as for the EU4Business support to local SMEs. Bucking the trend of a 30% drop in the economy caused by human and asset losses, the breakdown of normal terms of trade and loss of major foreign trade partners, EU4Business-supported SMEs reported increases in turnover of 18%.

This suggests that the results of EU4Business assistance in 2022 and prior years created a platform of sustainability that helped Ukrainian SMEs to survive the first year of the war: it will undoubtedly continue in 2023 and contribute to eventual recovery.

Types of Support Included in Access To Finance

A1 Capped Loss Recovery

This is a risk-sharing instrument in the form of a grant that the EU provides to an IFI. This grant is used by the IFI to partially cover the loss that any PFI, such as a local bank, would carry as a result of SMEs not repaying part or all of its loan. In this way, the PFIs feel more comfortable and are willing to use the credit lines from IFIs to lend to SMEs. However, the EU grant only partially covers the potential loss that PFIs could suffer. The recovery of loss covered by this EU risk sharing instrument is generally up to 10% of the total loan portfolio of the respective PFI (total value of the loans disbursed by the PFI from the respective credit line of the IFI) and generally up to 50% of each individual sub-loan. This actually means that if an SME does not pay back the loan to the local bank, the EU grant for capped loss recovery can actually cover half of the loss of the bank. In this way, the local banks are more willing to disburse loans to SMEs which are generally perceived as high-risk borrowers.

A2 Interest Subsidy

This instrument is a grant given by the EU to IFIs in order to lower the cost of their loans to SMEs in the EaP. The grant provides interest subsidies of up to 10%, which is applied to the regular interest rate, at which the IFI lends to PFIs and further on to SMEs. The purpose of this instrument is to lower the final cost of finance for SMEs in the EaP.

A3 Targeted Assistance (TA) to PFIs

This instrument consists of technical assistance to PFIs in the form of consultancy services, mentoring, and specialised training. The main effect of this instrument is that the PFIs (local banks and microfinance institutions) become more familiar with the modus operandi of the big IFIs, the characteristics of their credit lines, their reporting requirements, as well as the standards regarding financial and risk analysis of the potential borrowers.

A4 Capped Guarantees

This instrument consists of a guarantee given to IFIs in order to lower the risk of lending to SMEs via local PFIs through guarantees to reduce collateral requirements for SMEs. This is a guarantee that enables improved access to finance through the reimbursement of a portion of the loss caused by the SME portfolio. These guarantees are generally capped at up to 25% of the total portfolio of the respective partner financial institution and generally 70%-80% of each individual sub-loan. In the case of the DCFTA facility phase 1 EIB/ EIF, the guarantee is 25%/70%, for EIF COSME support the guarantee is 50%/70%, for DCFTA facility phase 2 the guarantee is 25%/80%.

A5 Currency Hedging Subsidy

This instrument is given to IFIs in order to enable them to disburse loans to PFIs (and ultimately to SMEs) in local currency. Traditionally, the IFIs only provide credit lines in euros or dollars. In order to sign credit contracts in national currency, the IFIs need to protect their investment through "currency hedging". This is a currency risk coverage facility provided by specialised agencies. This covers the foreign exchange losses of the IFIs, but such coverage is subject to payment of costs/fees. Without the EU grant to cover the cost of "currency hedging", the IFIs would add this additional cost in the lending contract with PFIs and the loans for SMEs in local currency would naturally become more expensive. Due to the EU grant, the IFIs and subsequently the PFIs can offer loans in local currency to SMEs at a more competitive price.

A6 SME Incentive Grants (linked to loans)

This instrument is different from regular grant schemes as the incentive grants are not given directly to SMEs as a "pure grant". The SME signs a loan contract from one of the credit lines of the

IFIs via the PFIs. After the loan is disbursed, there is a verification process to check if the loan was used for the purpose listed in the business plan or feasibility study and of compliance with the other pre-conditions for the loan disbursement. Once the verification report confirms compliance, a part of the loan is transformed into a grant, so that the total "cost" of financing is lowered. The most common incentive grants are between 10% and 15% of the loan value as is the case for the EBRD DCFTA facility 1 and 2.

A7 Grants to SMEs

These grants are non-reimbursable and generally modest in value in order to support as many SMEs as possible. In general, SME grants are disbursed in order to target specific economic development goals such as development in rural areas, poor communities, or a response to various types of crises. These grants are usually disbursed through Non-governmental Agencies (NGOs) with links to targeted communities.

A8 Structured Funds

This instrument is implemented directly by EU participation as opposed to risk-sharing with IFIs. Typically, this involves direct loans or equity investment in a financial instrument or fund. As the EU does not have the capacity to disburse direct loans to SMEs, this function is assigned to an intermediary. The most important EU investment in Direct Finance is shares in the European Fund for Southeastern Europe (EFSE).

A9 Equity

Equity is a direct investment instrument for funding SMEs by buying participation (shares) in the respective company. This type of support instrument involves more risk and is for now it is only active in Armenia, where the EU provides a first loss guarantee for the Amber Equity Fund that invests equity in SMEs of Armenia.

Human story

[Read full story](#)

The farmer grows business amid war with EU support

One winter day, farmer Andriy Turchyn woke up to calls from his friends. They said something he found hard to believe – the war started. Turchyn quickly checked the news and discovered that Russia invaded Ukraine. While many people fled the country in search of safety for their families, Turchyn stayed behind.

His family was actively looking for a solution to save the farming business amid the war. At this critical juncture, Lisova Polyana enterprise got a grant under the Additional Component of **FinancEast Programme** for the resumption of financing of small and medium-sized enterprises in the controlled areas of Donetsk and Luhansk regions. The **European Union**, through the **German Development Bank KfW**, provides financial support in the form of subsidies and compensations.

“We are farmers. Time demands patience and perseverance from us. We must instill in people the desire to work here, on the Ukrainian soil. So that they can earn decently and not have to go abroad. And then we will definitely win.”

Andriy Turchyn,
farmer, entrepreneur

Business Development Services (BDS)

B5	€0.16 million	€1.01 million
B6	€0.32 million	€11.81 million
B7		€2.41 million

BDS Instruments by Type

B1 Consultancy Services for SMEs

Through this instrument, the EU4Business Initiative aims to increase directly the knowledge and skills of SMEs in EaP countries through the direct provision (fully or partly paid) of non-financial business services. These can range from basic start-up and registration, accounting, marketing, input supply, technology and product development, training and technical assistance, infrastructure support, and advocacy. These services can be delivered through both international and/or local consultants, in both private firms/ individuals, and/or business support organisations.

B2 Capacity Building of BSOs

This instrument aims at increasing the capacity of Business Support Organisations (such as chambers of commerce, SME associations, professional bodies, the Sector Trade Association, training institutes, etc) to deliver BDS services to SMEs (whether members or not). The capacity building is achieved through mentoring, training trainers, advisory services, and study tours to either enhance existing services, create new ones, or improve organisational structures.

B3 Incubators

A business incubator is an organisation designed to accelerate the growth and success of entrepreneurial companies through an array of business support resources and services that could include physical space, capital, coaching, common services, and networking connections.

The EU4Business Incubators Instrument generally shares the cost with the local authorities where the EU bears the cost of refurbishment and cost-sharing arrangements for the running costs and/or service provision. One of the most important aspects related to this instrument is sustainability. As operating costs are high, the initial financial set-up is crucial for keeping the incubators viable after the EU intervention ends.

B4 Clusters

This instrument involves group support to SMEs involved in the same field of activity but at different positions in the value chain or with common interests. The basis of the cluster approach is the synergy of creating a more effective value chain within the cluster. The success of the SME cluster is closely related to the level of value added in the respective field of activity.

B5 Trade Information

This instrument provides SMEs already exporting, exporting infrequently, or those interested in exporting with the range of information needed to move closer to exports. This instrument can include generating the necessary information (brochures, guides, market reports) or developing tools for accessing online resources and intelligent searches. It covers market information, marketing guides, and market access requirements.

B6 B2B Activities

Business to Business (B2B) Activities support SMEs to make specific contact with nominally interested buyers (company decision makers in target export markets who regularly buy the product or service). These can include participation in online buyer auctions, trade fair participation, inward and outward trade missions, buyer meetings, etc. EU support can range from organisation, logistics, preparation and advice, as well as covering the costs of travel and/or stand and event costs.

B7 Export Strategies

This instrument is used at a national or sector level to develop a policy to increase a country's exports. This instrument is typically based on studies, analysis, and stakeholder consultation that assesses national production, market requirements, and export constraints. Working with government and stakeholders, it builds a common sector or national approach (and action plan) to develop the exports of competitive products in target markets. In addition, this instrument can also include support in coordination with implementation of the strategy itself as well as national visibility and branding, support programmes, and stakeholder dialogue.

Producers of traditional Ukrainian cheese go for growth with EU support

In the Carpathians, Ukraine's highest mountain range, live the Ukrainians highlanders – **the Hutsuls**. Apart from their distinctive language, music, traditions, and costumes, there is one more thing that Hutsuls have maintained for centuries – their traditional way of making the first-recorded Ukrainian cheese, Hutsul bryndza cheese, made from sheep's milk.

To help develop traditional cheese production in Ukraine, the **Association of Producers of Traditional Carpathian Highland Cheeses** was founded in 2018 with the help of the EU-supported Institutional and Policy Reform for Smallholder Agriculture project under the EU4Business Initiative. The project contributes to more inclusive, competitive growth-orientated agriculture that respects the environment, increases rural incomes, and slows down rural-urban migration.

“I learned everything through the project...When I came to the association, and we produced our first cheese, the price was EUR 4. This was even lower than the cost of production. Then we underwent external quality control with the project's support, and we started selling cheese for EUR17.”

Oleksandr Martyn, the Head of the Association of Producers of Traditional Carpathian Highland Cheeses

Business Enabling Environment (BEE)

BEE is the third largest of area of support in Ukraine representing **19%** of budgets in 2022

A total of
€46
million

-36%
compared with 2021

4 support instruments used in Ukraine

C1	C2	C3	C4
Capacity Building among Policymakers and Regulators	PPD (Public Private Dialogue)	Regulatory Reform	Information and Communication to SMEs
Through this instrument, EU4Business interventions aim at strengthening the capacity of staff of various government agencies to ensure better, more transparent, and open policies and regulations that affect business, whilst ensuring appropriate controls in the six Eastern Partnership countries. This can include making and amending policies, laws, and administrative procedures based on need and risk assessment. Through this instrument, EU4Business interventions deliver direct advisory, mentoring services, and study tours to the relevant staff involved in policymaking.	Public Private Dialogue is an instrument for more inclusive and targeted policymaking. Specifically, it involves effective consultation and collaboration between government and the private sector and/or its representatives, in order to achieve effective reform and administration of regulations that affect SMEs.	Through this instrument, EU4Business interventions support the EaP countries to improve the regulatory environment based on best practices and most often approximation (to align their SME related legislations, rules, and regulations with those of the EU). Approximation occurs in all six Eastern Partnership countries, but it is more intensely applied in the three DCFTA countries, which are committed to widespread adoption of EU business acquis under the Association Agreement (AA).	Through this instrument, EU4Business interventions support government to inform SMEs on reforms and implications for their business and steps to compliance with regulatory reform.

Allocation of BEE Budgets in Ukraine by Instrument

Allocation of BEE Budgets in Ukraine by Instrument

	Regional	Bilateral
C1	€0.29 million	€13.15 million

C3	€3.42 million	€13.59 million
C4		€3.94 million

Aggregated Results in Ukraine in 2022

Ukraine is the largest partner within the EU4Business Initiative: this is reflected in the fact that even in wartime, 27% of disbursements occurred here. This spending was fairly evenly balanced, with almost half of disbursements going to financial support. But at the same time a 28% spend on the enabling environment was recorded and, with potential EU accession on the agenda, this may increase in future years.

In 2022, the EU disbursed **€125.37 million** to support SME growth in EaP

16,602 → +54%

in 2021

Supported SMEs in Ukraine

had a combined turnover of

€11,295.46

million

Employed

374,225

Average annual income and employees

It must be noted that Ukrainian SMEs are generally larger than many of their other EaP counterparts. Average annual income of supported SMEs increased by over 40% in 2022, a reflection of the fact that some SMEs were able to take up the slack as larger enterprises were more heavily hit by the war.

However, the labour market was problematical and the average number of employees was almost halved, from 26 to 14. The war led to extensive internal and external migration and this had an immediate impact upon employment.

Support to SMEs in Ukraine Relative to EaP

As noted above, Ukrainian supported SMEs are much larger than in the other EaP countries. Their average income is more than double the EaP figure and the same goes for the number employed. However, productivity levels are similar, as shown in the data for income per SME supported employee.

Impact of EU support in Ukraine

Increase in turnover

Average increase in turnover of EU Supported SMEs in 2022

A2F BDS

In spite of the war, supported Ukrainian SMEs overall registered an increase in turnover that was almost up to the EaP average. However, this was not the case for those that received access to finance, where increase was only 56% of the EaP average.

Increase in exporting SMEs

EU-supported SMEs that started to export in 2022

A2F BDS

A strong result from BDS, where businesses received export consultancy services, meant that the number of SMEs exporting increased by more than double the EaP average. This may also be attributable to the shrinkage in domestic markets.

Increase in export

The increase in exports amongst EU-supported SMEs

A2F BDS

Increases in exports were well below the EaP average. This was due to general loss of key ports and overloaded export infrastructure. Those SMEs receiving consultancy services fared better than those benefitting from enhanced access to finance, but even here, the average was only half of the EaP level.

Access to Finance in Ukraine
